Introduction to Agent-Based Modeling (Summer 2023) 9.6 Wrapup and the Future of ABM » Unit 9 Exam

Instructions 1
Please select the best answer.
Question 2
What does the causal state modeling example show that we can learn automatically?
A. Everything we need for an agent-based model
B. Rules for an agent-based model
。 C. Patterns of behavior of aggregate systems
D. How many agent to model
Question 3
The growth of provides us with more insight into human activity than any previous time in history.
• A. big data
• B. census data
。 C. lab studies
• D. surveys
Question 4
The goal of is to create a suite of models that are both generalizeable and can create specific forecasts
• A. full spectrum modeling
• B. iterative modeling
• C. pattern-oriented modeling
• D. agent-based modeling
Question 5
is the idea that model developers and subject matter experts should communicate often.
A. pattern-oriented modeling
• B. agent-based modeling
• C. iterative modeling
• D. full spectrum modeling
Question 6
Which of these pieces of NetLogo syntax is associated with procedures that are created without a name?
。 A. MAP
• B. REDUCE
• C. RUN

Question 7		
In the code, (map [[rev emp] $ o$ rour	nd ((rev / emp) / 1000)] rlist elist), what do rev and emp refer to?	
• A. elements of a list that you are iterating of	over	
B. the first and second variable in the entire model		
C. a random number multiplied by one and two respectively		
D. they do not refer to anything		
Question 8		
Participatory simulation allows	to interact with (the)	
• A. people, robots		
B. people, virtual agents		
• C. doctors, patients		
• D. parts, whole		
Question 9		
System dynamics modeling is primari	ily composed of what two elements?	
A. math, equations		
B. agents, flows		
• C. stocks, flows		
• D. stocks, agents		
Question 10		
The GIS extension can read data direc	etly from (a/n)	
A. java file		
B.online internet collection		
• C. shapefile		
D. database		
Question 11		
	e node which exists on the greatest number of between	
A. shortest paths, nodes		
B. nodes, nodes		
C. shortest paths, cities		
 D. eigenvectors, eigenvalues
